

K.O. Self Defense Slug

BRENNEKE introduces a brand new development in the field of „Less-lethal ammunition“. The material selected expresses a significant step of innovation and is called K.Oline®. Due to quick deformation the new projectile can be used for all self defense purposes as well as for Law Enforcement. The disadvantages of rubber slugs or so called „Bean Bag Ammo“ and similar products will be avoided. As a result of German engineering the muzzle velocity will be only 96 m/sec. and the energy is at 46 Joule. Both figures are far under the data of comparable cartridges and enable an appropriate application. The optimal range will be between 8 and 10 meters. Then the K.O. Self Defense Slug cal. 12/70 (2 3/4") with a weight of 9,1 g / 140 grs stops every enemy immediately and unambiguous. The subcalibre slug sticks in a pink colored sabot and thus transfers the „Power of Pink“.

The new K.O. cartridge can be used from every shotgun with or without choke because of the almost not noticeable recoil. It will be available in a box of 10 mid 2022.

New Slug Ammunition 2022

Orange Lightning nature

The orange flash stimulates to universal use during a good hunt, to successful training at the shooting range and imparts the feeling of personal security.

The new subcalibre slug consists of food proof tin, weighs 19 g / 293 grs and will be offered in a box of 10 rounds cal. 12/70 (2 3/4"). It supplements the lead slug (28,4 g / 440 grs) with B.E.T was introduced in 2021. Both Original BRENNEKE slugs can be fired from all shotgun barrels with or without choke free of any problems. The accuracy of 5 cm dispersion at 35 m (5 shots) is outstanding. The ORANGE LIGHTNING nature will be available in April 2022.
